

AMENDMENTS TO THE CLAIMS

Applicant submits below a complete listing of the current claims, including marked-up claims with insertions indicated by underlining and deletions indicated by strikeouts and/or double bracketing. This listing of claims replaces all prior versions, and listings, of claims in the application:

1. (Original) A method for forming, by epitaxy, a heteroatomic single-crystal semiconductor layer on a single-crystal semiconductor wafer, the crystal lattices of the layer and of the wafer being different, comprising forming, before the epitaxy, in the wafer surface, at least one ring of discontinuities around a useful region, said discontinuities being at least one rough area.
2. (Original) The method of claim 1, wherein the layer is a silicon-germanium layer and the wafer is a silicon trench.
3. (Original) The method of claim 1, wherein an insulating trench is formed, after the epitaxy, at the ring location, said trench surrounding an active area intended to contain at least one elementary component.
4. (Original) The method of claim 1, wherein said rings have a square or rectangular shape and their limits are arranged according to paths of subsequent cutting of the wafer in electronic chips.
5. (Original) The method of claim 1, wherein the roughness of said rough area exhibits a mean square deviation ranging between 10 and 30 nm.
6. (Original) The method of claim 1, wherein an additional single-crystal semiconductor layer is formed by epitaxy on the heteroatomic layer, the natural crystal lattice of the material forming the additional layer being different from that of the heteroatomic layer, whereby the additional layer is strained according to the lattice of the heteroatomic layer.

7. (Original) The method of claim 6, wherein the additional layer is a silicon layer.
8. (Canceled).
9. (Canceled).
